

SECURE INTEGRATED SOLUTIONS

NRC Audit Support Services

Full implementation of cybersecurity regulation and inspection assistance.

FEATURES

- Expert guidance through the entire audit process
- Reduce risk of violations and fines
- Flexible levels of support
- Mock audits
- Employee training
- Risk mitigation
- Customized level of support based on the type of audit and kind of services needed to meet customers' requirements. Based on the audit specifications, we can recommend an appropriate level of support.
- Dedicated cybersecurity engineers are available virtually when we are not on site.

DESCRIPTION

Managing a cybersecurity system to meet the Nuclear Regulatory Commission (NRC) mandate is a significant investment. You want to make sure the audit has no surprises. The Mirion (formerly Collins Aerospace) consulting services will guide you through the entire compliance process to help you avoid violations, fines, and increase productivity so you can focus on the more critical tasks.

We've deployed more than 50 cyber solutions in the nuclear industry. No one knows our systems like we do. In fact, our solutions were developed from the ground up to adhere to the NRC regulations.

Our consulting services include preinspection support and mock audits, employee role training and role refinement, daily debriefs and continuous feedback throughout the audit. You'll receive immediate assistance whitepapers describing how the controls implemented on your particular component meet the requirement and mitigate the threat vector, as well as post-inspection support, including risk mitigation and remediation activities. With each inspection, we refine our support based on known scrutinies in order to optimize the process.
